BIO SANIT

Ecological awareness has changed greatly in many respects in recent years. Not only has the environmental idea moved into focus, but also the influence of one's own consumption behaviour - the so-called ecological footprint - is now perceived more consciously by many.

Environmental protection and energy efficiency are **SANIT-CHEMIE** essential obligations on the way to achieving our corporate goals. We at **SANIT** see the protection of nature not only as an absolute duty, but also as an inspiring motivation.

Moved by this idea of sustainability and the desire to offer our customers the best solutions, we have developed our **BIO SANIT** product line. The most important point here is to produce cleaners that are not only particularly environmentally friendly, but also highly effective and reliable. The natural presentation of the products should not only appeal to the environmentally conscious customer, but also convince him with the best cleaning result. With the products from our **BIO** line, you will receive the **SANIT** quality you are accustomed to.

For **BIO SANIT** cleaners we use ingredients that consist of renewable raw materials, are biodegradable and primarily of natural origin. We completely avoid synthetic dyes and fragrances. This makes the products also perfectly suitable for allergy sufferers and people with sensitive skin. To give the cleaning agents a pleasant scent, we use e.g., lime or peppermint. The natural fragrances are extracted from citrus fruits and the mint plant and spread a pleasant, natural scent in the room.

There are many reasons for using sustainable products from our **BIO SANIT** line. Try them out and contribute with us to reducing the ecological footprint of our society. For the sake of our environment and our children.

Resources and time can be saved by applying the right tools

If you rely on multi-purpose products for your cleaning routine, which can be used for many purposes on all waterproof surfaces, **BIO SANIT Power Cleaner** is the best choice for you. It can be used everywhere in the household and on the construction site. Without dyes and preservatives, with natural lime aroma, the cleaner convinces with excellent dirt dissolving power, and can also remove oil, grease, or protein residues in no time. Highly concentrated during production, the **BIO SANIT Power Cleaner** is diluted with water for routine applications and is therefore particularly economical in use. In addition, wiping with clear water is no longer necessary in most cases. This can save large amounts of water in private and public areas. And you can save an additional work step.

Faucet care with the power of nature

Coated, refined fittings have become an indispensable part of modern bathrooms. Customer demand for individual and sophisticated design is increasing and more and more fittings manufacturers are developing new surfaces for existing products. Do you also have a favourite piece fitted in gold or in a special colour? Then it must be cared for accordingly. Here, it is important: Hands off aggressive, acidic agents and low-quality microfibre cloths! **BIO SANIT Surface Polish** gently cares for your refined fittings and surfaces. Worktops in large kitchens or in a workshop can be polished to a high gloss with it. Dried-in dirt is removed effortlessly. **BIO SANIT Surface Polish** removes even stubborn stains caused by water softening systems without residue. For application, our Proficlean team clearly recommends the **SANIT 7 Star Care Cloth**.

BIO SANIT

There are many reasons for using sustainable products from our **BIO SANIT** line. Try them out and help us reduce the ecological footprint.

BIO SANIT Sanitary Cleaner

Powerful hygienic cleaner for the complete sanitary area. Removes limescale, rust, skin grease and soap residue from surfaces. All ingredients are of 100 % organic origin. With a pleasant peppermint smell.

Package/unit	Content	Art.-No.
6	1.000 ml bottle	3361

BIO SANIT Glass Cleaner

Provides for brilliant finish on windows, window frames, mirrors. Easily removes oils, greases, soot and atmospheric contamination. Dries very fast and leaves no stripes on surfaces. 100% organic.

Package/unit	Content	Art.-No.
6	1.000 ml bottle	3362

BIO SANIT WC-Cleaner

Removes easily and fast limescale, urine residue and contamination from all WC and urinal basins. Provides for hygienic cleanliness and long-lasting pleasant fresh smell. 100 % organic.

Package/unit	Content	Art.-No.
6	750 ml bottle	3368

BIO SANIT Floor Cleaner

Ecological soap-based floor cleaner for PVC and all alkali-resistant surfaces. Perfect for routine cleaning and care of all waterproof floor coverings. Provides for a very thin polishable anti-slip protection film on surfaces.

Package/unit	Content	Art.-No.
6	1.000 ml bottle	3366

BIO SANIT All-purpose Cleaner

Effective, powerful cleaner (concentrate) for the entire household. Dissolves stubborn soiling such as oils, fats, and proteins. Suitable for all waterproof surfaces. In addition, a wiping with clear water is no longer necessary in most cases. Also suited for cleaning equipment. 100% of the ingredients are of natural origin.

Package/unit	Content	Art.-No.
6	1.000 ml bottle	3363

BIO SANIT Power Cleaner

Maintenance cleaner for the daily cleaning. Dissolves even the strongest stains in the kitchen, bathroom, toilette and on all waterproof surfaces. Can be used concentrated or diluted. No synthetic fragrances and dyes. With natural lime scent. Particularly quick-drying.

Package/unit	Content	Art.-No.
6	1.000 ml bottle	3360
Spray head is supplied.		

BIO SANIT Surface Polish

Liquid polishing paste with biological surfactants for effortless removal of dried dirt or for high-gloss polishing of surfaces. Quick and easy to use. Very gentle on the material. Can be used throughout the entire household.

Package/unit	Content	Art.-No.
6	500 ml bottle	3367

BCP Rapid Disinfection Active

Ready-to-use solution. Disinfects and eliminates bacteria, viruses, and fungi. The surface to be disinfected does not need to be pre-cleaned. No wiping necessary. Free from fragrances and therefore allergy-friendly. Application time approx. 60 seconds.

Package/unit	Content	Art.-No.
6	500 ml bottle	3365

BIO SANIT Pipe Cleaner fluid

Improves drain performance. Based on natural raw materials. When used regularly, prevents bad smells and blockages. It does not develop any dangerous vapours. 100% ecological and biodegradable. Has no negative effects on humans, animals, or the environment.

Package/unit	Content	Art.-No.
6	1.000 ml bottle	3224

BIO SANIT Urinal Cleaner

A fluid cleaning concentrate based on selected microorganisms. When used regularly, it prevents bad smells and removes deposits in urinals. 100 % ecological and biodegradable. Has no negative effect upon humans, animals and environment.

Package/unit	Content	Art.-No.
12	1.000 ml bottle	3228

BIO SANIT WC Mobile

An additive for mobile toilets based on selected microorganisms. The effective microorganisms, which exist in nature, remove excrement and bad smells, when used regularly. No negative effect upon humans, animals and environment.

Package/unit	Content	Art.-No.
12	1.000 ml bottle	3225

BIO SANIT

The microbiological cleaners in our product line **BIO SANIT** contain beneficial bacteria and microorganisms that neutralise unpleasant odours and achieve pore-deep cleanliness.

Microorganisms are tiny animals that play an important role in our daily lives. Our **BIO SANIT** products use the properties of natural microorganisms to eliminate bad odours and clean hygienically.

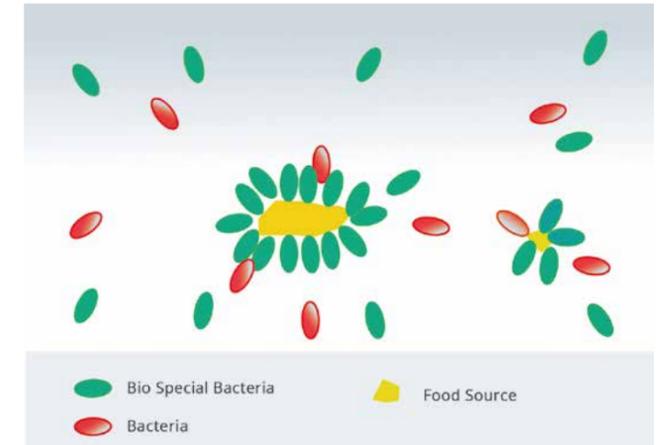

Unpleasant odours in sanitary facilities as well as from drains are caused by bacteria that settle in the remains of organic matter (e.g., urine, skin fat, food waste, protein residues, etc.). These organic deposits form a perfect food source for bacteria, which then feed on them, releasing foul-smelling gases.

Usually, people try to counteract this problem with the help of air-freshening room sprays or fragrance dispensers. Such aids only mask bad odours and are therefore not a sustainable solution. The smell remains as long as the cause – organic deposits – is not removed.

For our **BIO SANIT** cleaners, we also use bacteria, but unlike unpleasant odour-causing bacteria, they are especially useful.

The highly active **BIO SANIT** cultures reach even hard-to-reach places and consume the organic deposits. In the process, they release odourless substances such as water and oxygen.

BIO SANIT cultures deprive the odour-causing bacteria of their food basis (see illustration). Without food, the bacteria will disappear. And with them the bad smell.

Our **BIO SANIT** cleaners have been developed for regular use. With a weekly or fortnightly application, the organic deposits and soiling will be broken down regularly. This way, your drains/urinals, etc. become and remain hygienically clean and odour-free.

Sanitary & household

In today's world, hygiene is a central part of everyday life. In public areas, but of course also at home. In general, the question arises as to which products can be used to achieve hygienic cleanliness within one's own four walls.

Of course, cleaning has to be done quickly these days. No one has the time or inclination to spend hours scrubbing. Routine cleaning should not be a complicated or time-consuming task. You need a little motivation, and of course the right tools.

For almost four decades, **SANIT-CHEMIE** has made it its business to support you in your cleaning work with professional products and practical tips. You can always rely on the powerful household helpers from **SANIT**. Cleaning is easy and effective with our cleaners. And you can save time and effort, and it's even fun.

In the bathroom, the toilet, shower, and washbasin are used several times a day. This causes soiling. Typical soiling in sanitary areas includes limescale and water stains, soap residues and skin grease. No problem for the powerful helpers from **SANIT**. You have the choice between so-called universal cleaners and special products for different materials. Universal cleaners, such as **SANIT Pro Sanitary Cleaner DU100** or **BIO SANIT Sanitary Cleaner** can be used on all surfaces in the bathroom. Whether it's in the bathtub, shower, washbasin or on tiles - everything will shine again in a short time and without much effort. The special cleaners are always developed for specific base materials to provide maximum care for high-quality objects in the bathroom. No matter what material you have installed, **SANIT** always has a suitable cleaning agent in its product range. From enamel to acrylic to mineral casting: For the right product choice, our material compatibility table is always at your disposal.

By using surface sealing products, you can make cleaning much easier for a long time to come. **SANIT Lotus Glass & Ceramics Coat** creates an extraordinarily strong water and dirt-repellent protective layer on all mineral surfaces such as shower enclosures or ceramics. Chemical nanotechnology creates the so-called lotus flower effect: Water and soap residues roll off the surface. This significantly delays soiling and reduces the amount of work involved in cleaning many times over. By the way, **SANIT Sealer for tiles** ensures the same effect on all tiles in the kitchen and bathroom.

When it comes to bathroom cleaning, one of the least popular tasks is probably cleaning a toilet. Here, the choice of the cleaning agent used is decisive too. With a proper product, intensive mechanical cleaning will not be necessary. **SANIT WC Cleaner fluid** or the new **SANIT Drain Hurricane** will always ensure the optimum cleaning result. The high viscosity allows a particularly long contact time. This removes dirt and limescale deposits and eliminates bad odours when used regularly. And **SANIT Flushing Tank Freshener Stones** ensure a hygienic cleanliness in the toilet even during the flush. Their cleaning effect already unfolds during the water inflow and guarantees freshness as soon as you flush. Must have for every modern toilet.

With the powerful household helpers from **SANIT** you can make cleaning easier in many areas. We deliver a suitable solution for every problem. Extremely effective, time-saving and environmentally friendly. No household should be without these products!

You can find more tips from our Proficlean team on page 11.

Sanitary & household

The right choice of cleaning products is crucial so that cleaning can be done quickly, and the home really shines afterwards. It is good that you can always rely on the powerful household helpers from **SANIT**. Cleaning is easy and effective with our cleaners. You can save time and effort, and it's even fun.

Treat yourself to professional quality for your home!

SANIT Glass Ceramics Cleaner

Powerful cleaner for glass-ceramic cooktop panels, microwave ovens and tableware. If used regularly, protects from tough contamination.

Package/unit	Content	Art.-No.
20	250 ml bottle	3018

SANIT Enamel Clean & Polish

The special cleaner for all enamelled surfaces and ceramics. Cleans gently and provides brilliant finish. Removes metal abrasion on ceramics. Removes small scratches on surfaces.

Package/unit	Content	Art.-No.
12	90 ml bottle	3039

Package/unit	Content	Art.-No.
6	750 ml bottle	3411

Tips and tricks from the Proficlean team

Cleanliness influences our well-being

A clean home is not only important from a hygienic point of view. Cleanliness also has a positive influence on well-being and brings psychological benefits. Because of the strong connection between our inner life and the world outside, it can be difficult to find peace in a messy environment. Who wants to look at mould stains in the corners or between the tile joints while taking a relaxing bubble bath? The walk-in shower with a glass shower enclosure has become an indispensable part of modern bathroom design. If you want to fully enjoy the shower experience in this temple of well-being, limescale stains must not be allowed to cloud your view. The highest degree of transparency helps to open the senses. An absolutely clear dividing surface conveys a pleasant openness.

Cleaning is good for you

Cleaning is good for the soul. Whether you see cleaning as a nuisance or not, this often misunderstood activity gives us the ultimate degree of control. Cleaning has been proven to have positive effects on our psyche. Not only because it is clean and tidy afterwards, but because we have achieved a goal. This releases feel-good hormones such as dopamine and serotonin. Something similar happens during sports activities. Proper bathroom cleaning is somewhat like a sporting activity. By removing dirt, one also clears the soul and is then ready for new tasks.

Window cleaning as a work-out

Do not plan your next window cleaning as a chore, but as a sports replacement. After all, physical exercise also serves to burn off the calories, and to get the daily work routine out of your head. With **SANIT Glass & Mirror Cleaner** window cleaning is completed very quickly. And they are guaranteed to look stunning afterwards.

Cleaning can be fun

Not everyone will succeed in adapting this principal. But that is the truth. The prerequisite is that you can complete the cleaning tasks in a relatively short time and see a good result right away. With 30 minutes of work and the right cleaning products, you can really make your kitchen or bathroom shine. In other areas of life, we often have projects that take several days, weeks or months before we see success.

Slightly moisten joints before cleaning

If you want a good result quickly when cleaning the joints, our professionals recommend moistening the joints a little before cleaning. With **SANIT Ultra Power Cleaner DU3000** you can then remove grease and stubborn dirt. **SANIT Active Foam** helps to eliminate mould and mildew stains. After just 15 minutes of exposure time you will get the best cleaning results.

SANIT Heating guide

When nature begins to transform the landscape into a sea of colour in autumn, the heating season slowly begins in your home. Hardly used in the summer months, the heating is indispensable during the long winter nights. Professional maintenance and cleaning of the heating system is therefore all the more important.

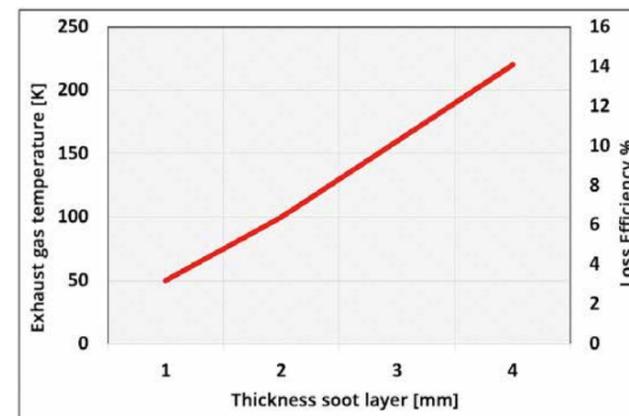

The deposits on burner parts and in combustion chambers affect the proper combustion of the fuel and reduce the heat transfer to the heating medium (water). This leads to a steady increase in fuel consumption and an increase in flue gas temperature. The result is rising heating costs and increased environmental pollution, as well as the risk of a system malfunction, which can even lead to a breakdown - with the same end result: warm living spaces and hot water, but at a higher price.

climate goal of European climate neutrality by 2050. Europe should thus become the first climate-neutral continent. In order to achieve this goal, everyone's contribution starts today. A professionally maintained and cleaned heating system conserves resources and minimises the contribution to environmental pollution and global warming. Be part of the solution today by using climate neutral products such as **SANIT Eco Membrane Expansion Vessel Filler, non-flammable** - the ecological container filler to protect the environment.

For you as a professional:

An annually cleaned and maintained heating system gives your customer security for the proper operation of his system. Clean system parts ensure the intended operation of the unit and thus for

- an environmentally friendly and clean combustion,
- a long service life of the system,
- a saving in heating and operating costs,
- a constant energy consumption and
- a better heat transfer.

The product range of **SANIT-CHEMIE** contains all the necessary products for a professional and expert maintenance and servicing of a heating system. We have the right product for every heating system type.

If you do not know which product is the best solution for you, simply contact our experienced field service and you will certainly be helped. You will find your personal contact for your postcode area on our homepage under "Sales areas". Just give us a call, we are always at your disposal with advice and assistance.

In the Building Energy Act, the legislator stipulates, among other things, a regular cleaning and maintenance by specialists (§ 60 GEG). A serviced system scores not only with a higher efficiency, more economical operation, and lower heating costs, but also with a lower environmental impact - less raw material consumption and lower flue gas temperatures.

In order to steadily reduce environmental pollution and protect the climate as best as possible, the European Union has proclaimed the

Heating

Only clean boilers work cost-effective and environmentally sound. Even minimal deposits in boilers increase fuel use up to 15 %. Professionals know this and take care of optimal burning.

SANIT-CHEMIE offers the best products to support this.

Connection Adapter for vessel fillers with cut-off device

Corresponding adapter for vessel fillers. To be connected to a membrane pressure expansion vessel of a heating system to supplement pressure in the vessel.

Package/unit	Content	Art.-No.
1	piece	8700

SANIT Eco Membrane Expansion Vessel Filler, non-flammable
Innovative and sustainable. Can be used without hesitation. It has a Global Warming Potential (GWP) many times lower than conventional, non-combustible vessel fillers.

Package/unit	Content	Art.-No.
12	400 ml can	3204

SANIT Membrane Expansion Vessel Filler

Controls and supplements pressure in membrane expansion vessels in combination with a corresponding adapter. Prevents corrosion of pressure vessels.

Package/unit	Content	Art.-No.
12	400 ml can	3191

SANIT Cleaner for stainless steel rust-free boilers

Ready to use cleaning mixture. Removes rust and rust film from the surface of stainless steel boilers. It is also suitable for use on aluminium-silicium heat exchangers. Free from hydrochloric acid.

Package/unit	Content	Art.-No.
6	1.000 ml bottle	3296
1	5 l canister	3297

Heating

The established products of **SANIT-FAUCH** brand have been specifically developed for all breakdowns which their users experience daily. Our range is complete with further special products, like vessel fillers that control and supplement pressure in membrane expansion vessels.

SANIT Testing Spray for Smoke Detectors

A practical and convenient testing option for photoelectric (optical) smoke detectors. A short spraying is sufficient to ensure a safe, reliable, and cost-effective testing method.

Package/unit	Content	Art.-No.
20	200 ml can	3418

Fauch 300

Shining soot and tar dissolver for oil and solid fuel powered boiler units.

Package/unit	Content	Art.-No.
10	500 ml Spray bottle	8020
1	5 kg canister	8021

Fauch 400

Cleaning concentrate for oil-powered boiler units.

Package/unit	Content	Art.-No.
1	5 kg canister	8030

Fauch 410

Foam aerosol of Fauch 400. Special cleaner for oil-powered boiler units.

Package/unit	Content	Art.-No.
12	600 ml can	8040

SANIT Boiler Cleaner

For cleaning of combustion equipment in boilers. Improves heat transmission and so saves energy. Dissolves even strongly adhesive non-combustible film. Neutralises boiler surface and protects against corrosion.

Package/unit	Content	Art.-No.
12	500 ml can	3193

SANIT Neutralisation Granulate

For neutralisation of acid combustion condensates in gas- and oil-powered condensing boilers. Suitable for use in all neutralisation units. It serves for neutralisation of acid condensates according to valid regulations by law. It raises the pH value to reach > 6,5.

Package/unit	Content	Art.-No.
1	5 kg bucket	3294

SANIT Heat Exchanger AISi Cleaner

A special cleaner for burning chambers and heat exchangers made from aluminium-silicium. Removes stubborn deposits and contamination in burning chambers. Provides for perfect heat transfer and saves energy. A ready for use product.

Package/unit	Content	Art.-No.
6	1.000 ml bottle	3241
1	5 l canister	3242

SANIT Pressure Spray Bottle

For an easy application of liquid SANIT products. The pressure sprayer is acid-resistant, robust, and easy to use. In addition, a flexible extension nozzle (27 cm) is available so that even hard-to-reach places can be reached.

Package/unit	Content	Art.-No.
1	1 Sprayer (1,5 l)	8703
1	1 Extension nozzle flexible (27cm)	8704F

Fauch 600

Special cleaner for gas-powered heating systems.

Package/unit	Content	Art.-No.
1	5 kg canister	8050

Fauch 610

Aerosol of Fauch 600. Special cleaner for gas-powered continuous-flow heaters.

Package/unit	Content	Art.-No.
12	600 ml can	8060

SANIT Spraying Pipe for Fauch 610

Stainless steel tube with spray head and special seal for Fauch 610.

Package/unit	Content	Art.-No.
1	piece	8702

Fauch Cleaner for stainless steel rust-free boilers

Rust film remover for stainless steel rust-free boilers. It is also suitable for use on aluminium-silicium heat exchangers.

Package/unit	Content	Art.-No.
12	1 kg bottle	8120
1	5 kg canister	8121

SANIT Fluid for Solar Panels

Heat transfer medium for application in solar panels. Provides frost and corrosion protection for all metal parts with constant pH value in complete range of operating temperatures.

Package/unit	Content	Art.-No.
1	10 kg canister	3285
1	20 kg canister	3286

SANIT Solar Collector Cleaner

Powerful but gentle cleaner for pipes of solar panels. Effectively dissolves deposits and contamination in solar panel pipes. Also suitable for cleaning of outer surface of solar panels.

Package/unit	Content	Art.-No.
1	5 l canister	32875
1	10 l canister	3287

SANIT Fireplace Glass Cleaner

Removes stubborn contamination from tile stoves and fireplace glass. Also suitable for use on cooking grates.

Package/unit	Content	Art.-No.
12	500 ml bottle	3189

SANIT Heat Pump Cleaner

Special cleaner for heat pumps, heat exchangers, and heating systems. It removes deposits, dirt, and contaminants that can accumulate over time in heat exchangers and other components.

Package/unit	Content	Art.-No.
6	750 ml bottle	3413

Fauch Incombustible Vessel Filler

Controls and supplements pressure in membrane expansion vessels (in combination with an adapter).

Package/unit	Content	Art.-No.
12	400 ml can	8200

Professional Gas Filling Set (SANIT)

Set for professionals. To control and supplement pressure in membrane expansion vessels of heating equipment and water under pressure equipment.

Package/unit	Content	Art.-No.
1	2 x Membrane Expansion Vessel Filler flammable 1 x SANIT Adapter for Vessel Fillers	8300MAG

Professional Gas Filling Set (Fauch)

Set for professionals. To control and supplement pressure in membrane expansion vessels of heating equipment and water under pressure equipment.

Package/unit	Content	Art.-No.
1	2 x Fauch Vessel Filler not flammable 1 x SANIT Adapter for Vessel Fillers	8300

Stainless Steel Sprayer

For easy application of liquid SANIT agents.

Package/unit	Content	Art.-No.
1	Sprayer (5l)	8705

Limescale control in the household

Limescale deposits form when mineralised water evaporates, causing all the salts in the water to concentrate. The harder the water, the more lime can precipitate. The hotter the water, the faster this happens. Calcification not only looks unsightly in the household, but also affects the function of household appliances and their lifespan. In the product range of **SANIT-CHEMIE** you will find professional and highly effective descalers for all areas of application in the household. Lime does not stand a chance against that.

SANIT Limescale Remover

Highly effective limescale remover for professional use on household appliances, aerators, shower heads, etc. Suitable for food applications. Cleans effectively and fast, yet gently. Boil-proof, with metal protection.

Package/unit	Content	Art.-No.
30	250 ml bottle	3001
12	500 ml bottle	3002

SANIT CitroPlus

Environment-friendly gentle, yet very effective limescale remover for shower heads, aerators, hot water devices, coffee makers, dish washers and washing machines.

Package/unit	Content	Art.-No.
12	500 ml bottle	3005

SANIT Urine Residue Remover

Professional highly effective Urine residue remover with very fast effect. Meets highest demands on hygiene and cleanliness. Dissolves urine residue, limescale and rust on WCs, urinals, bidets, wash basins, etc.

Package/unit	Content	Art.-No.
12	500 ml bottle	3031
1	10 l canister	3032

SANIT KalkGranate® Descaler

Special descaler based on innovative raw materials. Perfect against every kind of scale deposits. Specially good for kettles, fully automatic coffee makers, steam showers and whirlpools.

Package/unit	Content	Art.-No.
10	750 ml bottle	3008

SANIT ^{NEW} Coffee Machine Descaler

For regular descaling of fully automatic coffee machines, coffee machines and household appliances. The limescale-removing formula prevents malfunctions when used regularly. Suitable for all fully automatic machines.

Package/unit	Content	Art.-No.
12	250 ml bottle	3335
6	1,000 ml bottle	3337

Limescale control for installations

In the hot water range, around 40°C and above, limescale build-up increases with hard water. But soft water with a low mineral content can also lead to corrosion, rust, and pitting.

To free the pipes and system from limescale and rust, **SANIT** has the right products to combat limescale for every application in its product range. Simple application - maximum effect and optimal for the environment.

SANIT Professional Instant Limescale Remover

This very effective fast working descaling concentrate is developed for professional use. It is a concentrated powder to be diluted with water on site. No heavy weight to carry. Produces 20 litres of fluid concentrate. It's not a dangerous product in terms of transportation. Almost odourless.

Package/unit	Content	Art.-No.
1	2.000 g	3007

SANIT CitroPlus

An ecological descaler to remove limescale, incrustation and rust in boilers, piping systems, heat exchangers and hot-water tanks.

Package/unit	Content	Art.-No.
1	5 l canister	30055
1	20 kg canister	3006

SANIT Limescale Remover

Professional cleaning agent to remove limescale and incrustation in boilers, piping systems, heat exchangers, hot-water tanks. Based on formic acid. Very effective. Economical in use.

Package/unit	Content	Art.-No.
1	5 l canister	30035
1	20 kg canister	3003

SANIT Limescale Remover for zinc-plated materials

Professional cleaning agent to remove limescale and incrustation in boilers, piping systems, heat exchangers, hot-water tanks. Based on formic acid. Very effective. Economical in use.

Package/unit	Content	Art.-No.
1	10 kg canister	300410
1	20 kg canister	3004

SANIT Incrustation and Deposits Remover

Concentrate for professional application. Removes quickly, yet very effectively limescale, rust, urine residue and other incrustations in pipes, heating systems, boilers, etc. Superb power. Easy to use.

Package/unit	Content	Art.-No.
1	20 kg canister	3021

SANIT Incrustation and Deposits Remover for zinc-plated materials

Concentrate for professional application. Removes quickly, yet very effectively limescale, rust, urine residue and other incrustations in pipes, heating systems, boilers, etc. Superb power. Easy to use.

Package/unit	Content	Art.-No.
1	20 kg canister	3022

SANIT KalkBombe® Descaler

Powerful decalcification product for drinking water installations and systems. Suitable for use on iron, steel, cast iron, non-ferrous metals, aluminium and synthetic materials. Removes limescale deposits fast and effectively. 100 % biodegradable.

Package/unit	Content	Art.-No.
1	10 l canister	3333

SANIT Neutraliser

Agent for neutralisation of spent limescale and incrustation removers. Suitable also for water heating boiler condensate. Environment-friendly.

Package/unit	Content	Art.-No.
1	20 kg canister	3023

SANIT LF Passivation Agent

Agent for aftertreatment and passivation after chemical cleaning.

Package/unit	Content	Art.-No.
1	20 kg canister	3024

SANIT Universal Indicating Paper

Easy solution for indication of spent acids neutralisation.

Package/unit	Content	Art.-No.
1	piece	3310

Efficient solution against limescale deposits in cisterns

Limescale build-up in flush-mounted cisterns doesn't necessarily mean replacement: Targeted, contactless cleaning – without replacing of tiles on the wall – restores full functionality and flushing performance. The system then operates reliably, saves water, and stays in function for a long time.

SANIT KalkMax Professional

Professional portable descaling unit. Optimum dimensions, even for confined spaces. No shaft seals. High delivery volume of 30 litres/min. With changeover valve, with increased delivery pressure up to 8 metres.

Package/unit	Content	Art.-No.
1	Decalcification pump - blue - 1" connection	3326
1	Decalcification pump - green - 3/4" connection	3327

SANIT Flushing Tank Cleaner

Powerful cistern cleaner with deep descaling formula: Removes stubborn limescale deposits, protects mechanics and seals, ensures full flushing performance, and saves water through optimal function – effectively removes limescale and dirt from cisterns, flush elbows, seals, and mechanical parts.

Package/unit	Content	Art.-No.
1	5 l canister	30545
1	10 l canister	305410

Regular descaling makes saving water easy

Did you know that thousands of liters of water are wasted every year – simply because limescale deposits are built up in flushing cisterns? Limescale deposits build up on seals and technical components, causing leaks and impairing flushing performance. Even new replacement parts can sometimes be ineffective if limescale deposits have formed in hard-to-reach places – especially below the siphon on the seal in the so-called basket or basin. The flush pipe, which carries water from the cistern to the toilet bowl, can also become heavily calcified over time. This results in more frequent flushing – and water consumption increases dramatically.

Through targeted cleaning and descaling of all components – the flush bend to the siphon, siphon bell and basket – the cistern's functionality can be fully restored. The system will then operate efficiently, reliably and save water again.

A perfect combination: SANIT KalkMax Professional – Powerful cleaning for maximum efficiency

For professionals who value efficiency and reliability: The **SANIT KalkMax Professional** is a decalcification pump for powerful flushing of heating, water, and solar systems. In combination with the cleaning and descaling concentrates from **SANIT-CHEMIE**, you can remove limescale, rust, dirt, sludge, and deposits in no time.

Whether you clean boilers, pipes, heat exchangers, or entire heating systems and solar systems – the KalkMax Professional ensures unobstructed flow and optimal energy efficiency. It can also be used in industrial environments, e.g., for cleaning of water-cooled tools.

SANIT Flushing Tank Cleaner – Effective cleaning product for flush-mounted and exposed cisterns

Limescale, deposits, and unpleasant odours in the cistern, limescale-covered flush pipes, or insufficient flushing performance? Not a problem with **SANIT Flushing Tank Cleaner!** The powerful formula reliably removes even stubborn contamination and provides lasting protection against new deposits.

Ideal for use in exposed and flush-mounted cisterns – easy to use, highly effective, and gentle to materials. For a hygienically clean toilet system, smooth operation, and a longer service life of your sanitary equipment.

Fast. Secure. Professional. Exactly what the specialist company needs.

Flush-mounted cisterns in the modern bathroom

In many European households, flush-mounted cisterns have become a standard feature in modern bathrooms for years. They are space-saving, visually unobtrusive, and allow for easy and hygienic floor cleaning thanks to wall-mounted toilets. However, their design also has a disadvantage: their concealed installation in the wall makes maintenance and cleaning significantly more difficult – especially when it comes to problems caused by limescale deposits.

Limescale deposits reduce performance and leak tightness

Especially in regions with hard water, deposits build up over time on seals, the siphon, the flush pipe, and other components inside the cistern. These deposits lead to leaks, reduce flushing performance, and thus significantly increase water consumption. Particularly critical are limescale deposits, which can form beneath the siphon bell in the area of the seal – the so-called basket or basin. These limescale structures impair the seal so severely that even new replacement parts no longer guarantee reliable function, and leaks can persist. Likewise, the flush pipe, through which water flows to the toilet bowl, can become so narrowed by lime-scale that a single flush is no longer sufficient to achieve the desired flushing effect.

Increased water consumption and expensive replacement

This results in multiple flushes, which significantly increases water consumption per use. Such functional losses often lead to the cistern having to be completely replaced – an intervention that involves considerable costs and structural effort.

Professional system-based cleaning solution from SANIT-CHEMIE

Our solution offers a decisive technical advantage: With a specially developed descaling pump and a matching cleaning fixture, all components of the cistern – from the flush bend to the siphon, siphon bell and the flush pipe – can be descaled efficiently and contactlessly while installed. The cleaning process takes place in a closed circuit: The pump's supply flow is fed into the cistern via the push-button opening, while the return flow is either integrated into

the circuit or routed into the toilet bowl to drain the cleaning agent. This ensures thorough and material-friendly cleaning of all components.

The **SANIT Flushing Tank Cleaner**, an optimally formulated cleaning and descaling agent, continuously flows through the entire cistern system, removing even stubborn deposits. Our specially developed cleaning formula reliably removes limescale, deposits, and unpleasant odours from the cistern – even in hard-to-reach areas. After about 30 minutes, the interior of the cistern is completely clean.

Efficient system care – sustainable, economical, and effective

For regular care and to prevent new deposits, we also recommend the use of SANIT Flushing Tank Cleaner in handy 500 ml bottles. The cleaner is ideal for exposed and flush-mounted cisterns, is easy to use, highly effective, and gentle to materials. Regular use contributes to the hygienic cleanliness of the entire toilet system, ensures the long-term functionality of the flushing technology, and extends the service life of the installed components. In combination with our professional descaling solution, SANIT Flushing Tank Cleaner offers effective, sustainable, and economical care for your sanitary equipment – for permanently efficient cisterns with minimal maintenance.

SANIT Construction site & tools

A wide variety of conditions can be expected on the construction site and problems can arise in any form. Starting with the simple pipe installation, through the pressure test before final acceptance or, afterwards, the final cleaning before handover. In order to meet all challenges, **SANIT-CHEMIE** has been working with you since 1983 to find the right solutions for any hurdles that may arise.

With our professional products from the **Construction site & Tools** line, all work can be done quickly and effectively. Our experts are always at your side with their years of experience and will be happy to advise you with helpful tips and tricks. In general, all that remains is to clarify which task is to be done.

Pipe and conduit installation is one of the main works in a new construction or renovation of outdated potable water, waste water or heating systems. Depending on the type of pipes used, installation can be easier or more difficult. In any case, **SANIT Lubricant** should not be missing here. The unique formulation enables an easy assembly of all types of plug-in systems and has been used daily for decades in structural and civil engineering. Potable water installation is also possible without any problems. Since the product can come into contact with potable water, a DVGW certification is mandatory. Among other things, the DVGW tests the lubricant for harmful ingredients and awards the DVGW certificate if the test is successful. This certifies that the product may be used in the potable water sector without hesitation. No matter what type of installation is involved, with the unique **Lubricant** from **SANIT-CHEMIE** it will definitely be easier to carry out.

Once all the pipes have been installed, it is time for the pressure test. The pressure test is carried out on all pressurised pipes (e.g., heating or gas). As a rule, this acceptance test is carried out as a hydrostatic pressure test, i.e., the in-

stallation is filled with water, air, or gas (operating gas, e.g., natural gas, nitrogen, etc.). Subsequently, with the aid of the **SANIT Leak Finder Spray** or the **SANIT LeakCheck** all connecting parts and pipelines are checked for leaks. If there is a leak of operating fluid, bubbles will form after spraying with a leak detection agent so that the spot becomes visible. Finally, the leaking piece is replaced or repaired, and the test is performed again. After a successful „pressure test“, the system can finally be approved.

But our products are not only to be used in the area of new buildings and renovations, but they also provide help immediately and quickly in emergency situations as problem solvers. The best examples of this are blocked pipes and drains that cannot be cleared by conventional means. The **SANIT RohrGranate®** removes total blockages within a very short time and ensures immense time savings, and a cleaner work than with an ordinary spiral. The unique formula removes all organic deposits, textiles, hygiene articles etc. that have contributed to the blockage. Due to its high density, the **RohrGranate®** penetrates far into the pipe and acts directly on the affected area. Tried and tested for many years, there is no better professional solution for poorly functioning processes. Whoever uses **RohrGranate®** once you have used it, you will always use it again.

Whether installation, final inspection, cleaning, or problem solving – the strong professional products make daily work immensely easier and provide the right solution for every challenge. These products should not be missing in any workshop as they are effective, time-saving and environmentally friendly.

Construction site & tools

Developed by professionals and made for professionals.

The construction site helpers from **SANIT-CHEMIE** – highly effective and efficient for a fast assembly, optimal work performance and perfect protection. The best solution for the respective area of application.

SANIT ^{NEW} Neutral Cleaner

pH neutral cleaning agent for all water-proof surfaces. Removes fast and effectively heavy grease and oil contamination. Gentle to surfaces. Applicable on virgin stone. Free from acids.

Package/unit	Content	Art.-No.
6	1.000 ml bottle	3403

SANIT ProfiBauf Special Cleaner for Stubborn Incrustation

Special effective cleaning agent for use on building site that removes stubborn incrustation on almost all surfaces. Dissolves cement residue, limescale, concrete and flexible tile adhesive.

Package/unit	Content	Art.-No.
12	1.000 ml bottle	3170
1	10 l canister	317010

SANIT MiniMax® SHK

Removes poster marker, rests of labels and glues, paint stains, varnishes, waxes, oil and grease stains as well as other kind of contamination on surfaces. Highly concentrated and very effective. Very economical in use. For best results, use diluted: 2-4 capfuls (30-60 ml) to 5 l water.

Package/unit	Content	Art.-No.
20	125 ml bottle	3369
20	125 ml bottle/ Displaybox	3369DK

SANIT EVERTape®

The adhesive tape for sealing and repairing works. Easy in application. Possesses enormous adhesive force. Adheres to wet surfaces and can be stucked under water as well. UV-resistant, environmentally friendly. Developed for permanent repairing of different materials like metals, wood, PVC, PET and many more.

Package/unit	Content	Art.-No.
1	1 role	3236

SANIT RohrGranate® Professional Pipe Cleaner

For professional use only! The unique and optimal liquid agent for fast removal of stubborn grease deposits, hair, cellulose compounds and hygiene articles. Removes also total sealings of organic origin.

Package/unit	Content	Art.-No.
6	1.000 ml bottle	3064

SANIT RohrBombe® Pipe Cleaner

Developed for use by final consumers! The alternative pipe cleaner. Free from acids. It effectively dissolves drain pluggings, especially those caused by hair, soap scum and food rests. Doesn't produce any dangerous vapours or heat.

Package/unit	Content	Art.-No.
6	1.000 ml bottle	3066

SANIT Pumping System Cleaner

Ready-to-use dosage for the removal of deposits in pumping systems. Prevents blockages and malfunctions, thus ensuring trouble-free operation.

Package/unit	Content	Art.-No.
1	5 l canister	3373

SANIT Ultra Power Cleaner DU3000

Concentrated all-purpose cleaner with superb solvent power against oils, greases and other contamination on surfaces. For efficient, fast and easy cleaning. Suitable for use in high-pressure sprayers and steam cleaners also.

Package/unit	Content	Art.-No.
6	750 ml bottle	3013
1	10 l canister	3014

SANIT SHK-Tape repair tape

The universal tape for repair work in the sanitary, heating and climatization field. It seals, isolates, and protects. The SANIT SHK-Tape repair tape is self-welding and adheres without the need for an additional adhesive.

Package/unit	Content	Art.-No.
10	Box with 2 roles	3235

SANIT Building site mat

This mat of fibres protects working surfaces and floor cover. It absorbs oils, greases, fuels, cooling fluids and solvents. A non-slip and tearproof mat. Extreme highly absorbent. Each mat can absorb up to 0,9 l oil.

Package/unit	Content	Art.-No.
1	piece	3217

SANIT Zinc Spray

Zinc Spray is a quick-drying, abrasionproof and conductive corrosion protector. It's short-period heat-proof up to 500 °C. Zinc Spray is paintable.

Package/unit	Content	Art.-No.
12	400 ml can	3026

SANIT Zinc-Aluminium-Spray

Suitable for refinishing of damaged zinc coating. For application on heavily used surfaces like pipes and firing plants. Quick-drying, resistant against most acids and bases.

Package/unit	Content	Art.-No.
12	400 ml can	3027

SANIT Leak Finder Spray

DVGW-certified leak detector. Discovers even smallest leaks in all compressed gas, heating gas and compressed air systems, in pipes, fitting connections, pressure tanks, soldered and welded joints.

Package/unit	Content	Art.-No.
12	400 ml can	3030

SANIT Leak Finder Spray -15°C

DVGW-certified leak detector. Discovers even smallest leaks in all compressed gas, heating gas and compressed air systems, in pipes, fitting connections, pressure tanks, soldered and welded joints. Usable down to -15 °C.

Package/unit	Content	Art.-No.
12	400 ml can	3374

SANIT LeakCheck

Superb leak detector for compressed gas, fuel gas, compressed air systems, pressure tanks, pipe systems, valves, faucets, screw fittings, soldered and welded joints. Filled in an environment-friendly reusable spray bottle.

Package/unit	Content	Art.-No.
20	500 ml bottle	3035
1	5 l canister	3033

SANIT LeckCeck -15°C

Superb leak detector for compressed gas, fuel gas, compressed air systems, pressure tanks, pipe systems, valves, faucets, screw fittings, soldered and welded joints. Filled in an environment-friendly reusable spray bottle. Usable down to -15 °C.

Package/unit	Content	Art.-No.
20	500 ml bottle	3036
1	5 l canister	3037

SANIT Rust Solvent Mos2

Solves easily and fast corroded and tight connections. Due to its excellent penetrability this rust solvent reaches the smallest cracks and cavities to free them from rust. This is a universal rust remover which lubricates and stops corrosion.

Package/unit	Content	Art.-No.
12	400 ml can	3029

SANIT Adhesive Lubricant

A universal adhesive lubricant for almost all working areas. Provides for long lasting, viscoplastic, pressure-resistant greasing. O-ring compatible. It does not gum, does not freeze and does not embrittle in case of cold. Resistant against saltwater. Temperature range for application: -30 °C up to 200 °C.

Package/unit	Content	Art.-No.
12	400 ml can	3206

SANIT Universal Oil

A universal oil for almost all working areas. Provides for very good greasing and superb protection even in cracks and corners which are difficult to reach. Settles squeaking noise immediately. Tested according to DAB10.

Package/unit	Content	Art.-No.
12	400 ml can	3207

SANIT Silicone Spray

High-quality separating agent and lubricant for plastics, wood, rubber and metals. Maintains rubber and plastic materials and protects them from brittleness. Does not grease.

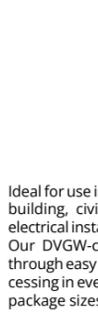

Package/unit	Content	Art.-No.
12	400 ml can	3095

SANIT Lubricant

Conforms to recommendations of the German Health Authority. The perfect lubricant for assembly of all push fit fittings and connections. Acid and base free. Applicable down to -5 °C. Excellent viscosity. Mild on skin.

Package/unit	Content	Art.-No.
24	250 ml bottle	3036
12	500 ml bottle	3037
12	1.000 ml bucket	3089
20	125 ml bottle/ Displaybox	30791DK

SANIT Lubricant

Ideal for use in underground construction, building, civil engineering, sanitary and electrical installation, heating and industry. Our DVGW-certified lubricant convinces through easy application and effective processing in every field. Available in different package sizes to meet your exact needs.

Package/unit	Content	Art.-No.
1	10 l bucket	3080
12	1.000 ml bucket	3089
20	125 ml bottle/ Displaybox	30791DK

SANIT Agent for smooth silicone filled seams

Product for even surfaces. Provides for visually perfect seams. Preserves the gloss of silicone. Prevents washing out of colour pigments. The agent is based on biodegradable tensides. Free from solvents. Ready for use.

Package/unit	Content	Art.-No.
20	500 ml bottle	3231

6	1.000 ml bottle	31291
1	10 l canister	3129

Tips and tricks from the Proficlean team

In order to be able to complete an all-round satisfactory construction or renovation project for the customer, conscientious preparatory work and post-processing of the construction site is necessary.

may be parked without interfering with family, neighbours, and friends. Create trust with your customer in advance through a structured preparation.

Treat customer property as your own

Many customers associate renovation work, construction sites and repairs with dirt, grime, and chaotic conditions. One of the most important criteria in the decision-making process when selecting the tradesman, is whether he provides clean and tidy work, and finishes and leaves the construction site in the same way. The majority of customers do not decide on the basis of advertising measures which tradesman will ultimately carry out the work, but rather award the contract to the craftsmen they trust on the basis of personal experience and recommendations.

Bathroom renovations or installation work in existing buildings and homes are part of the tradesmen's everyday work. It is all the more important to always be aware that this is the customer's property. This, like everything else, must be handled with extreme care. The path from the vehicle to the bathroom usually leads through corridors, stairwells, and rooms. Since it is impractical to take off and put on your work shoes when working, the **SANIT Disposable shoes** are ideal for protecting carpets and floors from dirt, scratches, and damage.

SANIT Finish Repair Pen

For fast and easy repair of installation and handling damages on sanitary products like bath tubs, shower trays, WCs, wash basins, etc. Also for use on tiles. Different colours available.

Package/unit	Content	Art.-No.
1	package with 4 rolls	3354

Our recommendation

- Include the topic of cleanliness firmly in your corporate mission statement
- Don't just meet the expectations of your customers, but greatly exceed them
- Leave the best impressions with your customer – he recommends you and is your best advertisement

Excellent working can be simple

Good organisation is fundamental. We will give you tips on how to inspire your customers and successfully master the difference between being a professional or an amateur.

Creating a checklist

All points to be clarified before work begins must be clarified with the customer. This includes, among other things, where material may be deposited, or the company vehicle

Order and organisation on the construction site

Renovations and installations take a certain amount of time. It is understandable that after each working day not all the material is loaded into the company vehicle but remains at the construction site. Ensure that equipment, tools, and materials are neatly tidied away and do not take up unnecessary space. Your work has an impact even when you are not on site. The customer sees the construction site, of course and gets a picture of your work - an untidy and dirty building site is absolutely counterproductive here. As a professional you have to leave your workplace clean.

Ultimately, at the end of the day, you can be sure to have made a positive Impression on the customer.

Waste bags

Material: LDPE. Suitable for any kind of common wastes in kitchen, basement, catering, workshop, stock, building site. Volume: 120 litres. Marked with "blue angel"

Package/unit	Content	Art.-No.
1	roll with 25 pieces	3355

Package/unit	Content	Art.-No.
1	Set: 5 l canister + 500 ml empty Spray bottle	3279

In times of climate change, snow accumulation is difficult to predict, but you must always be prepared. Property owners and operators of public facilities are obliged to clear and grit pavements in winter to prevent accidents due to black ice. But clearing snow is a strenuous job, especially on larger areas. Therefore, it is obvious to solve the problem with solid spreading materials.

In Germany, 1.6 million tonnes of road salt are spread every winter. Although the road salt has a quick effect, it is harmful to the environment because it seeps into the soil and groundwater. The plant world suffers from the use of road salt, as this raw material causes so-called „salt stress“, which impairs plant growth and in extreme cases can even lead to root death. To protect the soil from excessive salt input, road salt is therefore now banned for private individuals in many municipalities. In addition, road salt has a negative effect on road surfaces and other materials, as corrosive hydrochloric acid is formed when used. This aggressive

solid spreading material is also harmful to animal paws. The paws are attacked by the salt and can become inflamed. If the four-legged friends lick their paws after the walk, thus the salt also gets into the stomach. Nausea, vomiting, and diarrhoea are often the result.

As an absolutely environmentally friendly alternative to road salt, **SANIT Ice-thawing Granulate** causes no acidification of the groundwater. At the same time, it is 8 times faster in its effect than conventional road salt! **SANIT Ice-thawing Granulate** removes ice and snow automatically down to -50 °C and significantly delays the formation of new layers of ice. Our product is characterised by very high material compatibility and can be used without hesitation on pavements, car parks, garage entrances, as well as paved outdoor and park areas, schoolyards, etc. It is harmless to plant life and gentle on the feet of four-legged animals. Live completely ecologically minded with **SANIT** and perform your winter service with a good feeling.

Car cleaning

Vehicle care not only serves to maintain value, but cleanliness also inspires confidence in the customer. Quality begins with the journey to the destination.

You will find highly effective cleaning products with a maximum environmental protection for your vehicles at **SANIT-CHEMIE**.

1	5 l canister (Ready to use)	3289
1	200 l Barrel (Ready to use)	3288200

Tips and tricks from the Proficlean team

What are the advantages of pre-cleaning?

Frequent car cleaning pays off. Regular visits to the car wash end up providing many more advantages than disadvantages. Our professionals also recommend pre-cleaning the car before the car wash so that stones or sand cannot create scratches. The existing soiling comes off much better if it has been effectively pre-treated. Insider tip: use **SANIT Power Cleaner** or **SANIT Ultra Power Cleaner DU3000** for the pre-cleaning – also for car rims. You will be amazed at the difference.

Clear vision is important: In summer as in winter

Always remember: Clear visibility is an absolute safety factor in summer and winter! Therefore, perfect windscreen cleaning is particularly important. The cleaning agent may not smear. Streaks on the windscreen are also undesirable, as they impair visibility and thus concentration. In the warm months we recommend our **SANIT Vehicle Screen Cleaner for summer** with intensive cleaning power against dirt, grease and insect remains. And in winter you are of course always on the safe side with **SANIT Windscreen Anti-Freeze Concentrate**.

Wellness and pool

A wellness area at home guarantees perfect relaxation, well-being and lots of fun.

However, only if the facilities are clean and free from germs and bacteria! **SANIT-CHEMIE** has developed a special line of care products exactly for this purpose. With minimal effort for maximal enjoyment.

Adapter for Whirlpool Pipes Cleaner

An adapter for easy use of our Cleaner for Whirlpool Pipes.

Package/unit	Content	Art.-No.
1	piece	30981

Tips and tricks from the Proficlean team

Basic cleaning is recommended before the start of the season. After the winter break, every swimming pool and pool should be cleaned properly. The best way to do this is to drain the water. The dirt on the pool walls and floors can be removed mechanically with a brush or sponge. To make cleaning quicker and more effective, we recommend using **SANIT Ultra Power Cleaner DU3000**. This highly concentrated all-purpose cleaner dissolves dirt and grease effortlessly and leaves a clean surface in minutes. It is important to work quickly so that the cleaner does not dry.

After cleaning is before the care

So that you can enjoy your pool carefree you must always pay attention to the water quality. Bacteria and germs must not pollute the pool water. To stay on the safe side, you have **SANIT Hypochlor** and Chemoclor products available for the water disinfection. Alba Super K keeps

your pool free of algae and works well with other water care products. The small dirt particles are collected with the aid of the liquid product Flockfix and then filtered out.

The pH value of the water must also be correct. The ideal pH value is between 7.0 and 7.5. In case of deviations, you should resort to pH-lowering agents or pH-lifting agents. Both products are available in our product range in liquid and granular form. The pH value as well as the chlorine values can be easily determined with the help of **SANIT Pool Tester**.

If you use a whirlpool, the system pipes must also be cleaned regularly. Dirt and debris settle in it, providing a fertile breeding ground for bacteria. **SANIT Whirlpool Pipe Cleaner** is an active foam that effectively removes deposits in the pipes and keeps the system clean. So that you can really enjoy your wellness area at home.

SANIT Liquid pH Value Reducer

Reduces pH value in swimming Pools.

Package/unit	Content	Art.-No.
